Bold and Beautiful all season long!

We present to you the new beautiful edition of our perennial catalogue with our unique assortment. Our team worked very hard to offer you a complete assortment that directly matches your needs and that of your customers.

The total sales market in Europe is changing rapidly and therefore also the perennial market. From this relatively traditional perennial market many products are being developed and made suitable for various sales purposes. The presentation at the moment of sale has become more important for todays consumer. Therefore the different flowering perennials in different pot sizes are presented among all other products.

Also perennials are used more often for retail actions with a focus on visual attractiveness. This expansion of possibilities has caused a growth of the perennial segment. Therefore the traditional segment is under pressure now. The broad product portfolio of Florensis shows that we want to serve both segments. Florensis has been working intensively for years now to improve the genetic and technical characteristics of the products to improve the reliability. This because the market is forcing us to offer a product that can be produced continuously and stabile.

In this new catalogue we present to you many new spectacular developments and novelties. Digitalis Foxlight is a good example for this. A truly unique product for a terrace. Its unique "bold and beautiful" colours give it a very warm appearance and have been developed specially for the visual attractive market. Next to that Florensis will present now, but also in the coming years, many new developments within Lavandula, Echinacea, Aubrieta and Saxifraga.

The guarantee of a constant plant quality and the increase of delivery reliability are a constant challenge and have our highest priority. This is a condition to bring a product into the market and the basis of our wide assortment with many spectacular novelties. Our sales representatives are your contact person and are ready to support you in making the right choices.

HIGHLIGHTS

Anemone hupehensis

Little Princess

Japanese Anemone, Japanese Windflower

Little Princess is a first year flowering compact autumn Anemone suitable for 13-17cm pots. May plantings will give a plant in August which is covered with a lot of small pink flowers.

30

Arabis caucasica Aubris

Wall Rock Cress, Snow on the Mountain

The Aubris series is a new development based on uniformity, compact habit and prolific early spring flowering. This genetics provides you the most compact and uniform Arabis from seed. This most compact and uniform Arabis from seed makes evergreen, cushionforming plants for rockgardens, flowering borders or spring flowering combinations on patio containers.

Armeria maritima Abbey 🕮

Sea Thrift

Abbey series is early spring flowering. Plant habit and flowering are very uniform. Both colours are free flowering with strong, nice dark green foliage

Arenaria montana Ronda 🕮

Ronda is an improved selection better in uniformity with a more compact plant habit.

40

Aubrieta gracilis Florado 🕏

Dwarf Rock Cress

Florado is an early flowering variety, which in flower size and earliness is very close to Kitte Blue, but has more vigour in growth. Florado will complement the Kitte Blue, with an additional colour range, but should be taken 1 or 2 weeks later in culture. New colours are expected to extend the series.

Aubrieta gracilis Kitte® Blue 🎾

Dwarf Rock Cress

Round, solid cushion plant covered in large flowers. The violet blue appears from early March. Kitte® is the ideal series for cultivation in 11-13 cm pots.

Calamintha nepeta Marvelette

Marvelette is a first year flowering perennial flowering abundantly with a lot of small flowers. Very well branched plants are suitable for fast crop production on 10,5-13cm pots. With more plants per pot, nice big containers can be made. Brings scent and colour into the garden and patio.

Coreopsis grandiflora SunKiss 🕮

A colour breakthrough in seed C. grandiflora: SunKiss is the brightest yellow with large blotch available. Larger, deep red blotch and larger flowers than Sunfire. Controlled habit – fewer PGRs needed, or no PGRs in certain conditions. Fast finish, with timing similar to Rising Sun. Well-branched and floriferous. Excellent heat-tolerant plant for novice and expert gardeners alike – reliable, easy to grow and the colour blends well with almost everything.

Dianthus x barbatus Dash F1 🕮

The Dash series is the quick, stylish and elegant choice for first season flowering 3 litre premium container programs. Uniform, more basally branched but taller compared with the Barbarini series. Long, strong, straight stems hold bright, fragrant blooms that are long lasting at retail and perform well in planters and in the landscape.

Digitalis x hybrida Foxlight 🎾

The first Digitalis which does not spread its seeds and branches very easily which results in many flowers per plant. Foxlight will make a great focal point in the garden with 3 bold and beautiful colours. Besides that, Foxlight flowers all summer long, and is a Florensis exclusive series. Perfect for a 19 cm pot or for bigger containers. Foxlight fills a pot very easily and doesn't need vernalization. Foxlight is a real eye catching and high value product in retail displays.

87

Gaillardia aristata Mesa™ Д

Blanket flower

The first F1 Gaillardia from seed puts out lots of fast colour on well branched compact plants. More uniform in habit and flowering time than other seed Gaillardia – easier scheduling and shipping.

Helleborus niger Advent Star Impr.

New generation Advent Star stands out by flowering with more flowers and higher percentage of usable, well branched flowering plants.

Echinacea purpurea Double Scoop™ ∜

A new unique series of Echinacea is the Double Scoop which possesses outstanding characteristics. The well-branced series has a reliable finish with truly double flowers and clean foliage. Double Scoop will stand out year after year in any consumer garden.

74

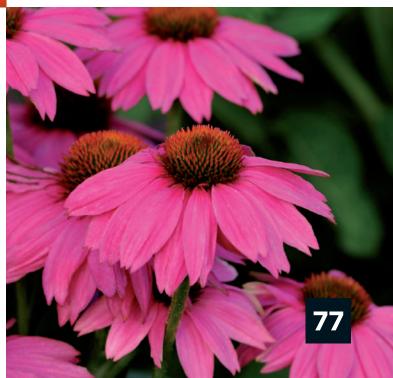

Echinacea purpurea Sombrero

A new series in Echinacea-range is the Sombrero. Very short and well branched series. Sturdy plants make a great presentation in 2 to 3 liter pots. The brightly coloured Sombreros show single flowers that will for sure get a lot of attention from the market. And not at least the plants can be produced as first-year flowering.

Echinacea purpurea

PowWow™ Д

The series that sets new standards for first year flowering Echinacea. Clearly improved qualities such as plant height and branching but mainly a success because the PowWow series flowers the first year from seed and thus can be sold as a profuse flowering specimen perennial. For the consumer, PowWow™ stands out because of its long flowering period. From late June until the first frost many round flower heads appear on well-branched flower stems.

Echinacea hybrida Cheyenne Spirit 🕮

A first-year flowering variety the late summer season.

28

Heuchera Carnival %

Incredible colour assortment of well-matched varieties with distinct leaf venation. Hybrid varieties have villosa parentage for better garden performance. Carnival is great for bigger pots and containers. The tissue culture raised liners finish quickly and uniformly within 8-10 weeks.

Iberis Nevina ؒ

Evergreen Candytuft, Perennial Candytuft

This vegetative variety builds a nice round shaped plant, with bright green foliage and clear white and early flowers.

Lavandula angustifolia

Ardèche 🕮

Common Lavender, True Lavender, English Lavender

Ardèche flowers the first season of cultivation with deep violet flowers, short stemmed on very silvery foliage. One of the earliest flowering lavandula angustifolia for annual early summer flowering.

108

Lavandula angustifolia Essence 🎏

Common Lavender, True Lavender, English Lavender

With many dark purple flowers and a very good branching habit, Essence Purple flowers 14 days earlier compared to the Hidcote variety. In biennial cultivation, these are very hardy plants and perform better as the standard Hidcote with less losses and more uniformity.

Lavandula angustifolia

Spear Blue 🕮

Common Lavender, True Lavender, English Lavender

Spear Blue is one of the most characteristic Lavandula's from seed. The appearance of Spear Blue is very strong and the plants are extremely long lasting. Spear Blue stands out with its very sturdy and strong flower stems and big flower spikes with intense coloured flowers.

Lavandula angustifolia SuperBlue ${\mathcal V}$

Common Lavender, True Lavender, English Lavender

SuperBlue is the newest and fastest first year flowering Lavandula available on the market, even 10 days earlier than our Essence Purple! Very suitable for bigger pots and containers. Shorter crop time and more uniform than seed raised Lavandula. Plants have big flower heads with a dark blue colour. SuperBlue is less winter hardy and flowers continuously in the garden till the first frost. A great opportunity for retail and grower.

120

Lavandula angustifolia

Valence Dark Violet

Common Lavender, True Lavender, English Lavender

Valance is the new generation of very uniform and compact growing Lavandula for smaller pots. Developed for its compact sturdy growth and dark flowers this variety suits very well for inside productions. Outside this Lavandula can be grown later in the season.

Lavandula stoechas Bandera 🕮

French Lavender, Topped Lavender

The seed raised variety Bandera sets a new standard in Lavandula stoechas. Bandera is highly uniform with a well branched compact plant habit, topped with many well shaped flowers, covering the silver coloured leaves. All these positive features of Bandera in combination with easy growing and a short harvest window are honoured with a Fleuroselect Gold Medal in 2015.

Leucanthemum maximum

Ohh La 🏖

Shasta Daisy

Ohh La is a brand new name for a well known series; with the addition of Lagrande we decide to make a new series name. Which consists of 3 white varieties with different flower shapes they all match in flower time and plant habit. Suitable for 13-19 cm pot with 1-3 cuttings. Varieties are first year flowering but are also available as big plug.

132

Lobelia speciosa Starship F1 🕮

Cardinal flower, Indian Pink

Starship is the benchmark genetic in Lobelia speciosa and sets a new standard. High uniformity in flowering and habit. The combination of the intense flower colours and the dark foliage give the Starship a striking appearance.

Monarda didyma Balmy 🍃

Bergamot, Bee Balm

With only 20 cm height, the Balmy series sets a new standard in Monarda. The basal branching plant fills pots with deep green foliage. Late summer these are topped with many Monarda typical flower heads. With high tolerance against mildew the Balmy series is a pleasure for grower and consumer.

Penstemon Polaris Magenta 🎖

Beard Tongue

Polaris is bred by Florensis and developed as a well-branching, short-stemmed series for use as a first year early-flowering summer perennial. The short, stable flower stems are encrusted with blooms and appear from mid June

149

Phlox subulata Fabulous %

Moss Phlox, Mountain Phlox, Moss Pink

The Fabulous series is earlier than other Phlox types and is specially made for pot production in early spring. Very uniform and well branching, it will cover the 11 to 13 cm pots. The hardy cushion will bloom with massed flowers when the bedding season starts.

Primula denticulata Prom

Prom is an improvement in plant uniformity of Primula denticulata. With this feature this series is recommended for a production next to indoor productions of late Primula acaulis.

Pulsatilla vulgaris Pulsar 🕮

Pasque Flower, Common Pasque

Uniform growing plants flower up to two weeks earlier with up facing large flowers. This feature makes this series very suitable for in and outdoor production in 9-13 cm pots. A must for the spring flowering portfolio.

Rhodanthemum hybrida 🕏

This species is native to the mountains of North Africa. But also in Northwest Europe this species is a hardy perennial. The appearance is comparable to garden mums but this plant is already flowering in early spring and continues during summer. Selected fully hardy varieties are suitable for early spring production and for first season summer productions too.

Salvia nemorosa Blue Marvel 🍃

Woodland Sage

This Salvia is different! Blue Marvel differs significantly from other nemorosa species, with its medium-sized fresh green foliage, the larger and attractive flowers. It branches well, remains compact and can be produced with just one cutting in a 13 cm pot or with several young plants in larger pots.

Saxifraga x arendsii Limerock 🆫

Mossy Saxifrage

With very large white flowers this variety is outstanding from other Saxifraga. Masses of flowers cover for a long lasting period the whole plant. A thankful plant in each consumers garden.

174

Saxifraga x arendsii Marto 🎏

Mossy Saxifrage

This series has been developed for the early sales segment not loosing any of the hardiness of the existing Saxony series. All varieties showing, as soon as temperature rises, buds and flowers with masses of long lasting flower sprays from March till June.

Saxifraga x arendsii Pixi Pan ∜

Mossy Saxifrage

Pixi Pan combines all proven features of the variety of Peter Pan and the series of Pixi. A very dense and fine leafed cushion with masses of flowers on a non stretching stem. Naturally this variety starts blooming a little later, which will extend the sales season of Saxifraga. Also this variety is very suitable for forcing when grown within sheltered circumstances. This opens all flexibility to be ready for sales when needed.

Kupferteppich > URC

New Zealand Burr

Acaena microphylla is a very long lasting species with excellent ground covering and drought tolerant. The copper red foliage offers a lot of decorative options. The fruits are also soft and non-prickly. Kupferteppich builds a very dense and flat carpet with somewhat red foliage.

Acaena microphylla is a very good ground covering variety and grows more slowly and compact.

12715 Kupferteppich 180 5 √ VI-IX 12, 16, 18, 20, 22, 24 26, 28, 30-32, 34, 36

Kupferteppich

Achillea filipendulina

Cloth of Gold

Fernleaf Yarrow

This species originates from the Caucasus and is one of the oldest cultivated perennials. In Northern Europe it is usually very hardy and is therefore often used for permanent planting in parks or garden borders. Achillea filipendulina is also well known because its yellow flowers last extraordinarily long in dried flower bouquets.

Long lasting garden perennial, perennial cut flower, scented plant.

11325 Cloth of Gold 288 120 √ VI-VII 6, 10, 12, 18, 26, 30 32, 34, 36

Cloth of Gold

Achillea ptarmica

The Pearl 🕮

Sneezewort Yarrow, Wild Pellitory, White Tansy

With its snow-white flowers above fresh green leaves, Achillea ptarmica really shines, even in shady positions. It grows up to 40 cm and flowers the first year from seed. It can also be used as a summer flowering pot perennial.

Pure white. Many double flowers.

The Pearl

This species originates from the North American prairies and flowers in the first year of growing with short, straight spikes. This scented plant smells of aniseed and fennel and is very attractive to butterflies and bees.

Little Adder 🏖

Anise hyssop

First year flowering compact Agastache which is covered with small blue-purple flowers. Plants are flowering whole season and are very attractive for bees and butterflies. Little Adder has a very short cultivation time and is suitable for pots and smaller containers. Ideal component for early summer mix perennials.

Little Adder

Agastache foeniculum NEW

33148 Little Adder 128 45 √ V-X 10, 12, 14, 16, 18, 20, 22, 24

Aurea D

Woolly Yarrow

This small growing species belongs in rockeries and small gardens. The small yellow umbels appear on 5-10 cm long stems above light green, woolly foliage.

Use as garden plant in pot size 9 cm; does not flower in the first year.

Achillea tomentosa

11330 Aurea

Achillea tomentosa

Aurea

Agastache aurantiaca

Hummingbird Mint

Agastache aurantiaca originates from Mexico. It is a sun loving plant that adores the warmth and thrives in dry positions. The many individual flowers of this scented plant appear continuously from the first year of cultivation onwards. Agastache is suitable for medium sized and large pots.

Very early pot perennial from June.

Agastache aurantiaca

13768 Apricot Sprite[™] 288 45 √ VI-VII 10, 12, 14, 18, 32

Apricot Sprite™

Milly Rock 🍃

Yarrow; Old man's pepper; Soldier's woundwort

With its many varieties, millefolium is one of the main species in the perennial assortment. Offering a wide range of colours and robust qualities, Achillea millefolium is a staple plant in gardens and parks. Many varieties flower in the first year of cultivation but not before mid summer. Very attractive to butterflies and bees.

This new Achillea series, consisting of two colours, is Florensis' own breeding. Milly Rock stands for: compactness, good branching, strong colours and very healthy foliage. With a plant height of about 30 cm, Milly Rock is a perfect partner for the cultivation in 13 cm pots. With several young plants also recommended for 17 cm and 19 cm containers. Achillea Milly Rock: a special article for one-year culture with a short cultivation time and for sale from June to August.

Cerise Queen I

Yarrow; Old man's pepper; Soldier's woundwort

Use as garden plant in pot size 9 cm. Also as cut flower.

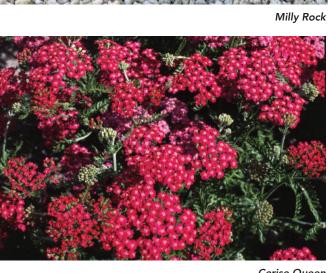

Cerise Queen

Umbrella III

African lilies are members of the Amaryllis family and originate from South Africa. A few species are also hardy in Central Europe. The large, fairy-tale umbels sit on up to one meter high sturdy stems and are real eyecatchers. Because the first flowers develop one to two years after planting, most plants are sold as green perennials.

Offered in 128 transplanted tray for better uniformity.

Blue

Ajuga reptans

Ajuga reptans 🏖 URC

Bugle

With its beautiful foliage colours rich in contrast, Ajuga has become a staple in the autumn assortment, as part of plant arrangements and balcony boxes. Because of its hardiness Ajuga will show off its attractive colourful leaves for a long time. After winter, a multitude of short blue flower panicles appear in late April the year after planting.

Black Scallop: Shiny black bronze large leafed foliage. Triploid, very strong and lasting variety.

Braunherz: Dark bronze green foliage, reddish heart. Burgundy Glow: Whitish-red-green variegated leaves. Chocolate Chips: Small leafed with narrow, dark bronze foliage.

Braunherz

Because of their impressive appearance, hollyhocks are residents in many house gardens. During high summer Alcea looks great with its magnificent densely covered colourful panicles.

Chaters

Hollyhock

With its round, fully double flowers on tall, straight spikes, the Chaters series has proved its worth in many gardens. As a specimen perennial, this is best grown as a biennial with vernalization. Usually grown in batches of 9 cm pots.

Androsace septentrionalis

Stardust 🕮

An excellent addition to the spring flowering perennial range. From a small rosette, many straight stems bearing umbels with star shaped flowers appear. A very attractive plant both in pot as well as in rockeries.

Stardust

Japanese Anemones are long-lived perennials. Their delicate pink to white bowl-shaped flowers appear from July/August and form a valued addition to the garden over the second half of summer. Anemone hupehensis is very undemanding and forms excellent ground cover in large group plantings. Hues of pink shaded flowers first year from seed, good container perennial.

Little Princess

Japanese Anemone, Japanese Windflower

Little Princess is a first year flowering compact autumn Anemone suitable for 13-17cm pots. May plantings will give a plant in August which is covered with a lot small pink flowers.

Aster alpinus

Aster alpinus 🕮

Alpine Aster

Aster alpinus is an early flowering species of the Aster assortment. The small, attractive plants of the overwintered crop flower from late April onwards with many typical daisy-like flowers above compact plant cushions. Very hardy and easy for outdoor cultivation in pots up to 13 cm.

Happy End

White

Astilbe chinensis

Pumila 🕮

This species originates from South Russia and China. Although Astilbe usually only thrives in shady or constantly damp positions, Astilbe chinensis also tolerates full sun and temporary droughts. The flowers appear in July of its first year of cultivation. Together with its excellent ground covering qualities, this means it can be used in many situations.

Summer pot perennial and ground covering plant.

Pumila

The original species were bred by Georg Arends at the start of the 20th century (hence the name). Over the last few years, there are also seed propagated Astilbes available in addition to the vegetatively propagated ones. These are fully hardy and just like the vegetative types suitable for use as long-lasting ornamental plants in parks and gardens.

Astary® 🔎

False Goat's Beard, False Spiraea

The brightly coloured very short inflorescences of the Astary series appear as early as the first summer of cultivation. Colour mixtures and unicoloured varieties when grown as annuals as well as biennials have stood the test in 10-11 cm pots.

Cerastium tomentosum

Cerastium tomentosum

The silvery white foliage forms very dense ground covering cushions. This quality means that it is possible to cover large surfaces quickly and permanently. With its evergreen foliage, it is also a welcome decorative component in autumnal plantings.

Ground covering plant and for autumnal displays. Flowers in May.

Cerastium tomentosum

Ceratostigma plumbaginoides 🏖 URC

Below surface spreading plant builds very dense ground covering foliage. In summer bright shiny green turns to bright copper red colour at the end of the season. The gentian blue flowers appear near the end of the summer and in autumn. Copper red foliage and blue flower makes Cerastostigma a favourite choice for decorative autumn plantings.

Ceratostigma plumbaginoides

Chaenorhinum origanifolium

Blue Dream @

Cushion forming low growing perennial, up to 15 cm tall. For rock gardens or borders. Carpets of violet blue blooms cover the compact, elegant round leaves from June onwards. This species reliably flowers the first year of cultivation and has also proved to be a good summer flowering pot perennial.

Proven variety in 11-13 cm pots.

Blue Dream

Chaenorhinum origanifolium

32, 36

Chiastophyllum oppositifolium 🕮

'Jim's Pride', Lamb's Tail

Small, thick leafed and very drought tolerant, ground covering perennial, especially suitable for shady areas. With bright yellow single flowers that cover trailing panicles, this species is ideal as a flowering pot perennial in 13 cm pot. In biennial cultivation with vernalization, the flowers appear from mid May onwards.

Ground covering plant for shade, pot perennial.

Chiastophyllum oppositifolium

Chiastophyllum oppositifolium

Chiastophyllum oppositifolium

Coreopsis grandiflora is the most successful of all summer pot perennials. Many varieties flower from June onwards with bright yellow flowers with sometimes a brown contrasting blotch. In the right position, they continue to flower until the end of their vegetation period. The efforts of the breeder have resulted in many new varieties that meet the requirements of modern horticulture.

Solanna™ 👺 URC

Very compact Coreopsis suitable for pots and small containers. This variety has a very fast culture time. Within 8-10 weeks the plants are covered with small double dark yellow flowers. This variety is also suitable for indoor production.

Coreopsis grandiflora

32754 Golden Sphere 128 30 √ VI-X 10, 12, 14, 16, 18, 20

Golden Sphere

Coreopsis grandiflora 🕮

Early Sunrise: Well known first season flowering.

Presto®: Very compact short stemmed first season flowering.

Sunfire: First choice for first season flowering pot productions.

SunKiss: A colour breakthrough in seed C. grandiflora: SunKiss is the brightest yellow with large blotch available. Larger, deep red blotch and larger flowers than Sunfire. Controlled habit – fewer PGRs needed, or no PGRs in certain conditions. Fast finish, with timing similar to Rising Sun. Well-branched and floriferous. Excellent heat-tolerant plant for novice and expert gardeners alike – reliable, easy to grow and the colour blends well with almost everything.

Sunray: Need vernalization to flower. Also within the JumboPlug program.

Coreopsis lanceolata

Sterntaler @

Coreopsis lanceolata looks a lot like coreopsis grandiflora. However, this species is native to North America and very long lasting. After vernalization the single shaped flower show up from June until the first frost.

Very long lasting, at its final position 40 cm.

Sterntaler

Corydalis cheilanthifolia

Pinyin 🕮

Native to western China. This evergreen plant with finely dissected leaves make it look like a fern relative. The plant bears yellow flower racemes blooming from spring to summer. Easy growing in early spring flowering perennial along with Arabis, Aurinia etc.

Icebrake 🕮

A very early spring flowering hardy mini Cyclamen. The dark winter green foliage forms dense carpets. Flowers can appear from December, but mostly in January when temperature is rising.

The Icebrake series is selected on separate colour shades on dark winter green foliage. The flowers show up on short stems on quite regular plant. Suitable for pot sizes in 9-10,5 cm.

Icebrake Mix

Cyclamen hederifolium

lvylce 🕮

Ivy-leaved Cyclamen, Hardy Cyclamen, Neapolitanum Cyclamen, Wild Cyclamen

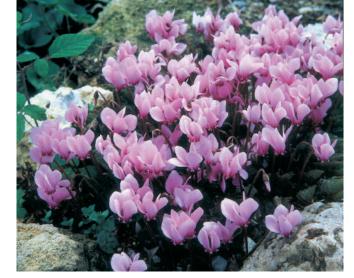

Fully hardy Cyclamen have long been rarities in the perennial assortment and were often sold as tubers. From seed propagated varieties often require 2-3 years until they flower in late summer. Because the foliage of Cyclamen hederifolium disappears in the summer, established plants flower without leaves. The ivy-like leaves appear towards the end of the flowering period but do remain on the plant over the winter months and are very decorative.

The Ivylce series was further developed from the species. It flowers in its first year of cultivation. In the first year, the beautifully marbled foliage also remains on the plant. This allows for a uniform production and sale just like traditional cyclamen. The natural look and winter hardiness also enable sale as a decorative autumn and winter plant.

Pure White: Very uniform selection with snow white flowers. **Rose Shades:** Shades of colours from light pink to deep rose.

Pure White

Rose Shades

Cyclamen hederifolium IvyIce

Delosperma congestum 🕮

Ice plant

This species with fine foliage looks similar to Delosperma cooperi and flowers easily. This species is winter hardy as long as not staying in wet ground. Round ray flowers appear continuously all through the summer. An ideal colour addition in in the first season flowering perennials.

Delosperma congestum

Sombrero™ 🖈 Roter Sonnenhut; Igelkopf

The genus Echinacea includes only nine species. All species are native to the endless prairies of East and Central North America. These perennials grow up to approx. 120-140 cm tall when fully developed. Echinacea purpurea is called "purple cone flower" because the original shapes usually had pinkish-purple flowers. Over the last decades, many varieties with new colours and cultivars have been developed. Each series below sets new standars in its class.

A new series in Echinacea-range is the Sombrero. Very short and well branched series. Sturdy plants make a great presentation in 2 to 3 liter pots. The brightly coloured Sombreros show single flowers that will for sure get a lot of attention from the market. And not at least the plants can be produced as first-year flowering.

Eucalyptus gunnii

Silver Tropfen III

The classic eucalyptus is a fast growing tree from the subtropical regions of Australia. In its juvenile stage, Eucalyptus gunnii is relatively hardy. Eucalyptus is peculiar because of its silvery green foliage, which has a different shape in its juvenile stage, compared to its adult stage. Young plants develop sprays covered in bluish green leaves. This is very interesting as far as the production of summer perennials in containers is concerned but the shoots are also popular as cut foliage.

Container perennial, cut foliage perennial.

Silver Tropfen

This smaller native species grows up to approx. 170 cm and resembles Eupatorium purpureum. It flowers with large burgundy blooms on tall, strong stems and attracts many bees and butterflies in late summer.

Euphoria Y URC Purple Joe Pye Weed

This very compact Eupatorium is very suitable for pot and container production. The plants do have very strong leaves and are flowering with medium sized purple flowers which last very long. A great pollinator plant.

Euphoria

Eupatorium maculatum

Native, this large specimen perennial develops well in the garden in moist soils or on the edge of the pond, growing up to 200 cm. If grown as a first year flowering plant in containers or large tubs it will stay more compact, only reaching heights of 60-80 cm. As a specimen perennial when grown as an annual, the plants flower towards the end of summer in shades of deep pink.

Atropurpureum III

Only to a limited extent as annual specimen perennial.

11701 Atropurpureum 180 200 √ VII-X 18, 26, 30

Atropurpureum

Erysimum suffruticosum

Goldstaub 🕮

Erysimum was one of the first perennials to be discovered for cultivation next to Primula and pansies. Because they are quick and easy to produce, wallflowers have become part of the staple assortment of many nurseries. These nostalgic plants spread a lovely fragrance, which is also a good and additional sales argument.

11696 Goldstaub

Goldstaub

Erysimum hybridum 🎾

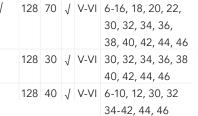

Erysimum was one of the first perennials discovered for growing along with pansies or primroses. Due to the easy to grow features it has established its position within the annual production planning.

Bowles Mauve: Most grown Erysimum variety in Europe, plants are very strong and flowers in a lavender blue colour. Can be produced as spring or summer crop.

Sunshine: The Fragrant Sunshine has a very compact variety with dense bushy growth. Wonderful bright yellow large and scented flowers are carried over a long season. The Fragrant Sunshine makes a splendid container plant for patio use and makes an excellent plant for impulse sales in 1.5 to 2 litre containers.

Red Jep: Compact variety with green leaves and red-purple flowers suitable for indoor production.

Rose Green White Green

Lenten Roses are one of the species that provides the first effective colour accents in a period that most plants are still dormant. With their many colours from deep reddish black, purple and hues of pink to pure white. All shades are possible, also in speckled combinations.

Crown I

Lenten rose; Lenten hellebore, Oriental Hellebore

The new seed born Crown series offers a range of single shaped flowers in separated colours. A large majority of this variety flowers already after its first year of cultivation in January. Start of cultivation in February indoor. Flowering plants can be sold from January and February in 11-13 cm pots.

Advent Star 🕮

Highly rated, evergreen, long lasting perennial for positions in semi shade. In professional cultivation Helleborus niger are grown as pot plants and cut flowers that cheer up the dark days leading up to Christmas with their pure white flowers. The seed propagated variety of Advent Star enables the production of flowering pot plants, in 10-10.5 cm pots the first year from a young plant. Start of cultivation in February indoor. Advent Star is the best branching seed propagated Christmas rose. Very reliable and uniform in flowering and planthabit.

New generation Advent Star stands out by flowering with more flowers and higher percentage of usable, well branched flowering plants.

Heuchera americana 🔎

Alum root; Rock geranium

With beautifully tinted leaves, this species is interesting for the pot perennials assortment as well as the summer and autumn segment. With reddish brown, bright green and marbled leaves in several colours, these are useful in many areas in addition to other plant combinations. Consumers are especially taken by Heuchera americana as a ground covering plant, also in difficult, dry and shady positions. The 128 tray contain selected seedlings offering a much higher plant quality and plant uniformity.

Dale's Strain: Green white marbled foliage. Marvelous Marble: Brownish green marbled foliage. Melting Fire: Strong curled leaves in an intense purple-red.

Palace Purple: Copper red shiny foliage.

Incarvillea delavayi

Incarvillea delavayi 🕮

Hardy Gloxinia, Chinese Trumpetflower

Originating from China, a tuber forming, very hardy perennial. In April first the flower buds start to appear, together with the foliage, incarvillea grows quickly into a medium-sized plant. Approx. 20-25 cm in a 3 litre container. Continuously many attractive and large trumpet-shaped flowers show up and grow in up to a final 50 cm tall panicle. This makes this species a highlight in any consumers garden.

Incarvillea delavayi

Inula ensifolia

Inula ensifolia 🕮

Swordleaf Inula

A very small but bushy perennial. It prefers warm, loose, calciferous soil in full sun. A multitude of golden yellow ray flowers appear from July in the first year of cultivation on plants that are then only approx. 15 cm tall. A very elegant summer pot perennial for 11-13 cm pots.

Inula ensifolia

Iberis sempervirens % URC

Evergreen Candytuft, Perennial Candytuft

"Candytuft" is easily one of the best mat forming garden perennials. By the end of April, its evergreen, very hardy foliage is entirely covered in snow-white flowers. In well draining dry positions, Iberis will last for a long time in the garden.

Appen-Etz: With distance the earliest variety in flower compact habit.

Fischbeck: Most grown Iberis in Europe, know for a compact plant habit and a dense pure white flower head. Premium quality variety.

Monte Bianco: This variety has dark green leaves and pure white flower heads. Plants can be produced on a 10.5-13 cm pot and are flowering medium early.

Nevina: This vegetative variety builds a nice round shaped plant, with bright green foliage and clear white and early

Snowflake: Late and large flowering variety well know for many years.

Lavandula angustifolia is by far the best selling perennial in Europe. Next to its beauty in the garden this species is also attractive because of the many uses of the essential oil and fragrance. With its lavender blue flowers that contrast nicely with silvery green, evergreen foliage, lavender is not just an ornamental perennial but also usable as a good ground covering plant in larger plantings. Its pleasant fragrance is a repellent for many insects in house and garden.

Essence Purple > URC

Common Lavender, True Lavender, English Lavender

With many dark purple flowers and a very good branching habit, Essence Purple flowers 14 days earlier compared to the Hidcote variety. In biennial cultivation, these are very hardy plants and perform better as the standard Hidcote with less losses and more uniformity.

Plum

Plum

Leucanthemum are also well-known perennials. This very long-lasting perennial, often with snow-white flowers exists in many flower sizes and shapes.

Ohh La > URC

Shasta Daisy

Ohh la is a brand new name for a well known series; with the addition of Lagrande we decide to make a new series name. Which consists of 3 white varieties with different flower shapes they all match in flower time and plant habit. Suitable for 13-19 cm pot with 1-3 cuttings. Varieties are first year flowering but are also available as big plug.

Lacrosse: Lacrosse with its remarkable flower shape adds a delightful touch for both traders as consumers. The white flowers with spoon-shaped petals appear clearly earlier than those of other varieties.

Lagrande: A variety very early first season in flower with one terminal white round shaped daisy. Following branches with many flowers over growing the first terminal and cover the plant. This behaviour creates a long lasting flowering period. **Laspider:** This variety, with its very large, double and pure white, ray flowers with finely-cut petals sets new standards = regarding garden daisies.

Lithodora diffusa & URC

Lithodora

Incomparably lovely gentian blue blooms on dark green foliage makes Lithodora a unique plant. The plants flower after successful vernalization from late May onwards and often have a second flourish in July/August. Lithodora have proved to be successful as flowering pot perennials in sheltered biennial cultivation on acid soil reaction. Just in time for the bedding plant season. In sunny well drained positions, Lithodora is fully hardy and consumers will be able to enjoy it for many years.

Compact Blue: With shorter branches suitable for 11 to 13 cm pots.

Heavenly Blue: Standard in the market usable for 13 cm to 3 litre container.

Gartenzwerg

The "Iceland Poppy" is rather a short-lived species that prefers cool sunny positions. This species really thrives in these positions and produces many attractive flowers in strong, bright colours for long periods.

Champagne Bubbles F1

A series that appeals due to its large cup-shaped flowers that appear as early as late autumn. In mild southern climates, flowering continues for very long periods and can last all the way through winter into spring. For the usual spring sales in the North, Champagne Bubbles should be grown in the field. However, it is important that the plants have established before winter sets in and that the foliage dies back. In this cultivation method the very large flowers appear above the round plants from the end of March, weather depending.

Rose

Tall Phlox paniculata is a summer flowering garden perennial with stunning flowers, which is bred in many variations. During the day its rich colour spectrum appears in many shades depending on the light. Phlox originates from areas in North America with lots of precipitation. The plants are strong, long-living and fully hardy, meaning that very cold winters do not present any problems.

Phlox Famous is a series which is selected on plant habit and flower size. We offer you a range of colours which match in plant habit and flower time. Plants are medium high and branch very well. Famous can be grown as first year flowering or over the winter.

Franchetii 🔎

Bladder Cherry, Chinese Lantern, Japanese Lantern, Winter

The Chinese Lantern is mainly known as a dried flower used in decorations. However, Physalis is also usable as a container perennial for late summer sales. The white flowers later on turn into orange fruits with 10mm large berries. In annual cultivation the plants will grow up to a maximum of 40 cm. Until the end of cultivation the plants should be fertilized amply, otherwise they will wither prematurely.

Use as garden perennial in 9 cm pots.

Obedient Plant, False Dragonheart

Very long lasting, easy to care for and sometimes vigourous labiate plant. The common name comes from the fact that the flowers can swivel and bend to the left or right making it look as if the plant obeys something or someone. The "Obedient Plant" is a pleasant garden or border plant that, depending on the variety, flowers with bright lilac or white spikes that are produced from mid summer until early autumn and are good cut flowers. A few new breeding products flower first year from seed and are suitable as container perennials for sale in late summer.

Crystal Peak White: Short variety, annual. Rose: Garden variety, cut flower perennial.

Prom 🕮

The characteristic spherical flower heads are composed of many individual flowers. The plants are excellent for inclusion in wild herbaceous borders but also for flower beds. Next to Primula acaulis, Primula denticulata have long since been a staple in the spring assortment. When grown in the field in spring, the plants can be forced into flowering in January or left to flower the natural way and marketed.

Prom is an improvement in plant uniformity of Primula denticulata. With this feature this series is recommended for a production next to indoor productions of late Primula acaulis.

White: Use as garden perennial in 9 cm pot.

Primula japonica

Miller's Crimson

Japanese Primrose

Cool and very damp positions in semi shade are preferred by the Japanese primrose. In damp positions they also tolerate sun. In June and July, the plants are adorned with whorls composed of many large, individual flowers.

Large-flowered, also as container perennial after vernalization.

Primula japonica

11946 Miller's Crimson 288 60

Miller's Crimson

Primula rosea

Grandiflora III

Himalayan Meadow primrose

Primula rosea develops its deep bright pink flowers as early as March, even before its first leaves have appeared. The luminosity of its flowers turns Primula rosea into a real stunner. This partly explains why these plants are part of the staple perennial spring assortment. Starting cultivation in the field on time, as well making sure that the water does not contain too much potash are conditions for success.

Spring perennial for approx. 9 cm pots.

Primula rosea

Grandiflora

Primula veris

Cowslip

Native Cowslips have not always been a staple ingredient of our gardens. But after they started to become part of the assortment of nurseries and garden centres again, they are increasingly used in plantings. These plants are popular spring perennials because of their natural wild look and it is easy to combine them with traditional primroses, although it is better to pot them up with pansies.

Primula veris: The native type of Cowslip.

Lime with Orange: Highly improved selection for uniform productions next to primula acaulis. Fully winter hardy.

Orange with Yellow: A good improvement in uniformity but does not reach the full quality of the lime and yellow variety. Very hardy variety!

Pure Yellow: Very uniform selection compared with the native variety, good winter hardiness.

Rose

This harbinger of spring originates from Central Europe and bears very elegant, bell-shaped flowers with luminous yellow stamens. It appears as soon as the temperatures rise. The flowers are the first to appear, the fine foliage follows later. However, Pulsatilla do not show their full splendour until they have reached their final destination in the garden where they last for many years and also show their enchanting, hairy, feathery seed-heads that remain on the plant for a while. Precultivation in the field and the addition of calcium will ensure that the plants flower.

Uniform growing plants flower up to two weeks earlier with up facing large flowers. This feature makes this series very suitable for in and outdoor production in 9-13 cm pots. A must for the spring flowering portfolio.

Sedum

2.

4.

Sedum is a plant genus with many different species. All these species are leaf succulents that are true artists as far as water retaining qualities are concerned. In this way Sedum takes up a special position and can be used in many different ways. Apart from extremely dry positions in the garden, many species are also extremely suitable as green roof perennials. Many first season flowering sedums can also be used to get through the very difficult warm summer months, when there is not much else that is saleable.

The assortment below is divided into four groups.

1.
Large-leaved, flowering varieties for solitaire pots from 13 to 19 cm.

Medium-size leaf sedums for sale as flowering pot perennials in 9 to 13 cm or combined in packs.

Fine-leaved varieties for small flowering individual pots or packs.

Varieties proven as garden or landscape and roof plantings but only within limits usable as pot or pack performing varieties at point of sale.

1. Large-leaved, flowering varieties for solitaire pots from 13 to 19 cm.

The knee high Sedum with many related species out of the Hylotelephium group originates in whole Europe. The modest dry resistant varieties are decorative already by the large leafed foliage. The spectacular flower heads appear in late summer in the first season of cultivation. The best known variety is Autumn Joy (Herbstfreude).

Seduction № URC

With basal branched and short upright flower stems, the series of Seduction is a significant improvement in the Sedum telephium group. With large flower heads and unique colour this series sets new standards for production in 13-19 cm pots.

Verbena bonariensis 🕮

Purpletop Vervain, Tall Verbena, Clustertop Vervain, Pretty Verbena

Verbena bonariensis is a welcome addition for landscape gardening. Densely filled spherical flower heads that seem to hover on very long, branched, almost leafless stems, add some airiness to any herbaceous border. With its very long flowering period, this is an impressive eye catching plant. Only advisable as a perennial plant in 9 cm pot.

Verbena bonariensis

32, 34, 36

Verbena bonariensis

Venosa 🕮

Tuber Vervain, Slender Vervain, Rigid Verbena

Verbena rigida is one of very few perennial Verbenas. It is however not very long-living. In very cold, snowless winters it freezes. These Verbenas add striking accents to consumers gardens with their brightly coloured blooms and long flowering period. All varieties are first-year flowering and suitable for 13 cm pots to 3 litre containers.

Veronica austriaca

Veronica austriaca

Austrian Speedwell. Hungarian Speedwell

In many parts of Europe this is a native species. This robust speedwell thrives in both dry as well as wet positions. With its intense royal blue colours, Veronica austriaca appeals in any garden. This Veronica is an easy-to-grow, early springflowering, heat-loving perennial.

More variable seedling, use in 9 cm pot for landscape gardening.

Royal Blue

Veronica gentianoides

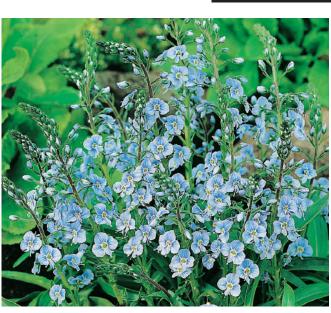

Only the leaves of this species are reminiscent of Gentian, not the flowers. Nevertheless, this sturdy perennial attracts attention because of its upright flower clusters, growing up to 20 cm tall, which appear in May and June. In the herbaceous border and in larger rockeries, they prefer a sunny but moist position. This species can be produced as a biennial in 13 cm pot. Seedlings are variable.

Veronica gentianoides 🕮

Valeriana officinalis

Grasses

The beauty of many grasses does not always reveal itself immediately. Nevertheless, ornamental grasses are becoming increasingly popular. Many grasses are useful for adding structure to mixed perennial plantings, as a colourful addition to annual summer flowering bedding plants and in the autumn assortment. The species that we offer are easy to grow and will appeal to the consumer because of their very good shelf life and because they cost little or nothing to maintain.

Isolepis cernua Wi-Fi™ ₪

The fine elongated leaves of Isolepis Wi-Fi look like hairs. In combination with the small white flowers that cover the entire plant, this results in a special, very modern look. The plants are suitable for indoor use but also great in all sorts of outdoor combinations. Most used as an annual grass.

Festuca amethystina 🕮

Large Blue Fescue

Evergreen grass with fine, arching foliage. The leaves of Fescue change colour from bluish green in spring to bluish gray with coppery reddish accents in late summer. Fescue is produced year-round.

Very long lasting garden performance.

Festuca gautieri 🕮

Grows like a clump of grass with a beautiful bright green appearance. When the density is properly applied, they can make a nice ground cover. The bright green coloured flowering spikes appear in June/July.

Very long lasting garden performance.

Grasses			1	*	(6)	
17173	Isolepis cernua Wi-Fi™	288	15		V-XII	10, 12, 14, 16, 18, 20, 22-26, 28, 30, 32, 34, 36, 38

14908	Carex albula Amazon Mist™	288	25		VII-IX	6, 10, 12, 16, 18, 22, 26, 30, 32, 36
11295	Koeleria glauca Coolio™	288	25		VII-IX	6, 10, 12, 16, 18, 22, 26, 30, 32, 36

Festuca cinerea Festina™ Д

Blue Fescue

With its deep blue tones and fine, soft blades this grass is perhaps the most well-known and has established itself as a main variety in many areas. It is for sale year-round, especially around Easter and in autumn for decoration.

One of the best for yearround bluish grass.

Festuca ovina 🕮

Sheep's fescue

One of the dwarf varieties in the blue green Festuca assortment. With silvery blue foliage a good species for autumnal decorations.

Very long lasting garden performance.

Carex albula Amazon Mist™ Д

Curly sedge

Low growing, tuft-forming grass with silver green glossy leaves. Easy to cultivate with constant growth. An important grass for the autumn assortment.

Very long lasting garden performance.

Koeleria glauca Coolio™ Д

With its many shimmering inflorescences, Koeleria adds lovely accents to flower beds, pots and tubs. This tuft forming greyish blue species is grown easily and reliably and can be sold all year round.

Very long lasting garden performance.

Festuca valesiaca Glaucantha 🕮

Wallis Fescue

This Festuca species is one of the most intense silver of all fescues. The colouring and quality of this type are close to those of many vegetatively propagated varieties.

Very long lasting garden performance.

Luzula sylvatica Starmaker™ ₪

Greater Woodrush

This species with broad fresh green leaves is a very good ground covering plant for shady areas. It quickly and efficiently covers small surfaces with its short shoots. Once established, Luzula is very strong and persistent.

Bouteloua gracilis 🕮

Bleu Grama, Mosquito Grass

Low growing, tuft forming grass with brownish green, hairy leaves. The interesting dark flower spikes are comb-shaped and held at right angles. A field of these plants gives the impression of a swarm of mosquitoes hovering above grass. Hence the name mosquito grass.

Due to flower stems and leaves yearround garden performance is offered.

Carex comans Bronco™ Д

New Zealand Sedge

From New Zealand originating all year round reddish brown, finely structured grass. This truly low growing plant with its reddish brown, overhanging leaves is often used in smaller autumn arrangements.

Very long lasting garden performance.

Luzula nivea Lucius 🔎

Snowy Woodrush

Dark green tuft forming grass with very attractive inflorescences. This grass flowers only after vernalization. Because of its straight upright inflorescences with large stamens it looks like the plants are covered in snow. Especially eye catching when used as a nice structure plant.

Carex buchananii Red Rooster™ Д

New Zealand Leatherleaf Sedge

Year-round reddish brown grass with wiry, straight upright leaves. Very popular for use as a medium sized, structural element in autumnal plantings. Cultivation in full sun in always moist pots will prevent the top shoots drying out. Mainly for use in autumnal decorations.

The higher plant habit gives for years a nice garden structure.

Carex flagellifera Bronzita™ 🔎

Weeping Brown Sedge

Medium sized, year-round light reddish brown grass with spreading, trailing blades. This species is also one of the main varieties for autumn decorations.

Very long lasting garden performance.

Carex howardii Phoenix Green™ Д

Medium sized, straight upright growing up to 30 cm tall grass. With its glossy orange yellow leaves, this grass has a special place amongst perennials for use in autumn.

Very long lasting garden performance.

Stipa tenuissima Pony Tails™ 🕮

Mexican Feather Grass

This feather grass bears light brown seed heads that stand out clearly from the foliage. The filigree blades, arranged in tufts, move with every breeze. Used individually or in groups, the dense grey green clumps look great in rockeries as well as in flower beds. Annual cultivation for autumnal decorations.

Nice structure plant.

Carex testacea Prairie Fire™ **□**

Orange New Zealand Sedge

Straight upright growing grass. In late summer and autumn, this copper-coloured grass provides shiny colour accents in hues of orange and green.

Prairie Fire gives a real long standing highlight due to its orange and green leaves.

31056	Juncus effusus Spiralis	288	50		VII-IX	6, 12, 18, 22
11304	Pennisetum villosum	288	50		VII-IX	12, 18, 30
18490	Anemanthele lessoniana Sirocco	288	60			12, 18, 22, 26, 30, 32, 36
11302	Pennisetum alopecuroides	288	80		VII-IX	6, 10, 12, 16, 18, 22, 26, 30, 32, 36

Juncus effusus Spiralis 🕮

Very long lasting garden performance. This ornamental grass is outstanding by its special habit.

Very attractive as solitair and in different combo's.

Pennisetum villosum

A fine leaved ornamental grass topped with beautiful feather-like flowers. The rich flowers appear already in July and last all summer season. Very suitable for first season container productions.

Most used as an annual flowering grass and stays nice during first frost.

Anemanthele lessoniana Sirocco

A grass with fantastic colour shades in copper, pink and green. These colours are best during the warm summer months. The plants can give a beautiful structure within all mixed summer plantings.

Excellent in summer or late summer container production.

Pennisetum alopecuroides 🕮

The flowers of this species are especially attractive. The tall, long-lasting, brush-shaped plumes appear from September in the first year of cultivation above dark green leaves. Beautiful specimen plant. This variety from seed is taller than many of the more commonly sold vegetative types.

Deschampsia cespitosa

Rose Plume

White Plume

Miscanthus sinensis

Carex pendula 🕮

Weeping Sedge, Pendulous Sedge

Very large evergreen grass with broad pendent leaves. In the garden, this species stands out because of its many decorative flower spikes. Fast growing in its juvenile stage.

Very long lasting garden performance.

Deschampsia cespitosa 🕮

Easy to grow, native grass. Its many up to 80 cm tall, golden yellow flower spikes enjoy swaying in the summer wind. This species looks its best when used as a specimen plant. The spikes appear in the second year in the garden after overwintering.

Very long lasting garden performance.

Cortaderia selloana 🔎

Pampas grass

Tall very well-known grass, originating from South America (Pampa). Seedlings grow very fast and are very suitable for production of perennials in 9 cm pots. In their final position, they produce large feathery flowers from September in the second or third year.

A real solitairy highlight for a big garden.

Miscanthus sinensis

Chinese Silver Grass, Zebra Grass

Miscanthus is one of the very tall grasses that are especially suitable as a specimen plant. The type from seed as offered here is somewhat variable but stands out because of its habit with very fine blades. In early autumn, it flowers with early reddish brown spikes.

Much used in the background of the garden or as higher solitairy.

Phragmites australis 🕮

Known as a common reed and grows in water or swamps. It is used in larger garden pots, and for manufacturing roofs. In the last decade it has become important for biological water cleaning systems.

General conditions of October 2012 for the sale and delivery of products by the General conditions of October 2012 for the sale and delivery of products by the limited companies according to Dutch law Florensis B.V., Florensis Breeding B.V., Toscana Breeding B.V., the general partnership Floha vof, with its seat in Zwijndrecht and Florensis Cut Flowers B.V., with its seat in Rijsenhout, all companies hereinafter individually to be called: "Florensis".

Article 1: Applicability

1 These conditions apply to all offers from and all orders to Florensis for the sale and delivery of products by Florensis, and to all agreements with Florensis with respect thereto. The General sales and delivery terms of Plantum for ornamental and horticulture cultivation material and plants as well as horticulture materials., as filed with the Chamber of Commerce Rotterdam, Gouda office, on 21 May 2012 (also called General terms for ornamental plant and nutritional horticulture production of Plantum: the Plantum conditions) are likewise applicable, but only to the extent that the Florensis conditions do not deviate from them. A copy of the Plantum conditions will be sent immediately on request. They can also be consulted at www.plantum.nl.

.2 The applicability of conditions of the other party or customer of Florensis (hereinafter: buver) is hereby expressly excluded.

1.3 Provisions that deviate from these conditions or from the Plantum conditions can be invoked by the buyer only if and to the extent that these provisions are accepted by Florensis in writing. Verbal agreements with and usual practices from the buyer are therefore binding on Florensis only after and to the extent that they have been agreed by Florensis in writing.

Article 2: Definitions

- Products: plants, genetic material from ornamental plant varieties, including (processed) seeds, cuttings and plant material, as well as cultivation material and/or
- ornamental and (nutritional) horticultural plants as well as horticulture materials Buyer: both the direct and the indirect other party or customer from Florensis, including – even if solely – a licensee from Florensis.
 Force majeure: each circumstance outside the control of Florensis, foreseen or
- unforeseen at the time of conclusion of the agreement, which wholly or partly impedes or seriously hinders the implementation of the agreement by Florensis, and also, in so far not yet included, crop failure, production of seeds of insufficient quality, diseases in the enterprise of Florensis or its suppliers, transport problems, labour strikes, government measures, fire, water, frost or storm damage, disturbance in the supply of basic materials, water and energy, and lack of or late delivery by suppliers for whatever reasons.
- Special production: products which do not appear in Florensis' catalogues or ordering lists, or products which are to be delivered outside normally applicable delivery weeks for Florensis, and which products after an order from the buyer Florensis either orders from a third party or produces itself outside the normally applicable period for Florensis for growing such products, in both cases in a slightly larger amount than in the order by the buyer, with a view to the usual risk and rate of failure.
- Crop and processing reservation: a reservation by Florensis with respect to any delivery in accordance with the buyer's order to account for factors and uncertainties within the natural process of production after planting of seeds, after the raising of mother plants for the production of cuttings and after taking cuttings, which factors and uncertainties cannot always be controlled or influenced, even if they are known. Delivery EXW: delivery EXW as meant in the Incoterms 2000.
- Usual trading quality: a product quality which is deemed to be at least average within the (Dutch) supply side sector of seeds, cuttings or plants.

Article 3: Offers, orders and agreements

3.1 All offers by Florensis in product catalogues, ordering lists or specific quotes, including all offers on internet, are non-binding. For that reason, Florensis can refuse any order with respect to any offer within 7 days from the order date without need for explanation. Florensis does not sell to private persons.

- 3.2 Orders by the buyer are irrevocable
- 3.3 Verbal orders, also through intermediaries, result in an agreement as confirmed in writing by Florensis, or in the absence of such confirmation, in an agreement in conformity with the actual implementation by Florensis.
- 3.4 The buyer should exclusively refer in his acceptances and in his orders to product names and numbers as mentioned in Florensis' catalogues and ordering lists. In the case of special production, the applicable names and numbers are as used by Florensis in the contacts with
- 3.5 Agreements oblige Florensis to the sale and delivery of usual trading quality under the Florensis crop and processing reservation and barring force majeure. If at any time before, during or after the agreement Florensis has rendered advices, of whatever nature, these advices only form part of the agreement with Florensis, or form a separate agreement with Florensis, and only have significance and legal effect within the relationship between parties, if these advices were given in writing and buyer has agreed to owe to Florensis for these advices a separate compensation.
- 3.6 Florensis is under no obligation of any guarantee or warranty for achieving the purpose or result which the buyer seeks to realise with the products as purchased, also not if any advices given by Florensis related to the use of such products with a view to such purpose

Article 4: Prices, amounts and weights

4.1 Unless mentioned differently, all prices quoted are vexclusive of taxes and/or duties/ levies which will be applied by any government with respect to the products (to be) sold either before or at the time of delivery or export, and they are exclusive of all cost of third party licensee rights and of cost of transport or sending paid for by Florensis.

4.2 If after the conclusion of the agreement but before delivery, one of the factors determining the cost price of the products increases (including an increase in the relevant currency exchange rate), Florensis is entitled to increase the agreed price in conformity therewith. If the agreed price increases by more than 15%, the buyer can rescind the agreement by a written notice to Florensis within 7 days after Florensis notified the buyer of the increase

 $4.3\, \text{The applicable prices are calculated according to the pricing tables mentioned in Florensis' most recent catalogue or ordering list(s). These prices apply to amounts as$ mentioned in the tables in case of same time taking of the same variety

4.4 If in an order the desired amount deviates from the Florensis standard amounts or multiples thereof, Florensis is entitled to deliver the next higher standard amount.

4.5 The smallest product amount mentioned in Florensis' catalogues/ordering lists is the minimum amount which can be ordered. The minimal order value is EUR 250

4.6 In case of special production, Florensis is entitled to deliver more than the agreed amount if the number of well developed products ordered or grown by Florensis enables Florensis thereto, and the buyer pays a pro rata higher price than the agreed price in proportion to the higher amount delivered, with a maximum of 10% of the original purchase

4.7 Each quoted weight of an amount to be delivered by Florensis is a weight on a net basis unless mention to the contrary.

Article 5: Delivery period and delivery

5.1 Delivery periods stated by or agreed with Florensis are approximate delivery periods only. Delivery will take place within a reasonable period if no specific period has been stated or agreed.

5.2 The delivery period is based upon the circumstances applicable at the time of the conclusion of the agreement and upon the assumption of timely delivery by third parties of all materials/products necessary for the implementation by Florensis of the agreement. If a delay occurs as a result of new circumstances after the conclusion of the agreement or as a result of late delivery by third parties, the delivery period is extended as is reasonable taking into account all circumstances.

5.3 All products are deemed to be delivered once they stand ready for transport.

5.4 Exceeding any delivery period with a maximum of two weeks does not entitle the buyer to suspension or rescission of the agreement, and also not to any damages.

5.5 Exceeding the delivery period with more than 2 weeks entitles the buyer to rescission in whole or in part of the agreement, but only if this is done in writing within 7 days after the two weeks period. In the case of such late performance, Florensis is also entitled to rescind the agreement in part or in whole. In the circumstances foreseen in this article, Florensis does not owe the buyer any damages.

5.6 Delivery is ex works (EXW), unless otherwise agreed. On delivery, the risk connected to the products in question, with all that is connected there to, is transferred to the buyer.

5.7 The buyer located in a different EU Member State than the Netherlands will inform Florensis in writing of his correct VAT identification number. Furthermore, the buyer shall provide all necessary information and documents that Florensis requires as proof that the products have been delivered in a different EU Member State than the Netherlands. The buyer will indemnify Florensis for all claims resulting from and all negative consequences of the buyer not or not entirely complying with the provisions in this article. Florensis reserves the right to increase the price payable by the buyer with the VAT rate that would apply to the delivery in question in the event of delivery within the Netherlands.

Article 6: Crop and processing reservationAll offers from, all agreements with and all deliveries/advices by Florensis are subject to the crop and processing reservation as such is usual with respect to products to be delivered in the (Dutch) business sector in which Florensis is active. If Florensis invokes this reservation with justification and in writing, the consequence is that any offer from or agreement with Florensis is withdrawn or rescinded, but only for the part that is effected by invoking the reservation, without Florensis owing any substitute obligations or any damages

Article 7: Reservation of title

7.1 All products delivered by Florensis remain the property of Florensis until the time of full payment of all claims of Florensis on the buyer with respect to the underlying agreement or any comparable agreements, including claims for damages, costs and interest. The buyer has no right of retention with respect to any such products for whatever reason. Once the buyer is in breach with his payment obligations, Florensis is entitled to remove all that has remained its property from the buyer's premises and buildings. The buyer will facilitate this removal as much as possible.

7.2 The buyer is obliged to store the products that have been delivered subject to retention of title with the necessary care and in such a manner that the products can be identified as property of Florensis.

8.1 Trays and packaging, except single-use packaging, delivered by Florensis together with the products remain at all times the property of Florensis. These trays must be stored by the buyer free of soil or plant material until the time of returning them to Florensis, in a proper manner and in a suitable storage place, all for the account and risk of the buyer

8.2 The buyer or third parties through the buyer's doing are not allowed to use the trays and packaging of Florensis. If such use takes place anyway, the buyer owes Florensis for each tray used an amount of EUR 10 per week or part of a week that this use continued.

8.3 The trays and/or their in mould labels and other durable packaging must not be written on, blurred, covered or otherwise damaged or made unusable. Any costs due to cleaning, repairing, replacing and/or destroying trays so affected are for the account of the buyer.

8.4 Trays are to be returned through Florensis taking them back at the time of the next delivery to the buyer from the place of delivery, unless a different agreement applies. If at the time of a delivery a next delivery is not yet planned, Florensis will (have a third party) pick up the trays at a time to be agreed with the buyer at the place of the earlier delivery, in which case the costs of taking back the trays are for the account of the buyer and will be charged to the buyer separately.

8.5 If at the agreed time for returning the trays they are not free of soil or plant material and if they are not ready for return at the place agreed therefore, all extra costs for Florensis with respect to such shortcomings are for the account of the buyer and will be charged to the buyer separately.

article 9: Breeder's rights or contractual protection of notified and registeredvarieties 9.1 Source material of varieties belonging to the ornamental horticulture, which are protected by a requested or granted breeder's right and/or which are protected by a contractual chain or continuous stipulation in the European Union and/or any country outside, and also source material of varieties which are marked with a R (for Royalty), cannot be used for multiplication or trade.

9.2 The source material as delivered can only be used by the buyer for the cultivation of finished ornamental products at the buyer's premises. The buyer is obliged to pass on this restrictive clause by way of chain or continuous obligation to his customers.

- 9.3 The buyer is only allowed to sell the finished product resulting from the source material delivered to him under the applicable variety name and any applicable trade name.
- 9.4 The buyer owes to Florensis an immediately due penalty of EUR 0,55 per multiplied plant if any of the afore mentioned stipulations are breached and such breach is attributable to the buyer. Florensis is entitled to additionally claim compensation for the actual damages incurred from the party at fault.
- 9.5 Florensis is entitled to enter the buyer's enterprises and/or any premises under buyer's control, where Florensis delivered source material is present, during normal working hours and without the need of any advance warning, in order to review and assess that material.
- 9.6 At the first request of Florensis, the buyer shall allow Florensis inspection of his administration for the purpose of verification of buyer fulfilling his obligations meant in this
- 9.7 Should the buyer discover a mutant in a protected variety, the buyer must immediately inform both Florensis and the holder of the breeder's rights of this by registered letter
- 9.8 The buyer shall release to the holder of the breeder's right at his written request trial material of such mutant within a period of 2 months from receipt of the request.
- 9.9 The buyer is aware that the finder of a mutant in a protected variety requires permission from the growers of the maternal strain to exploit the mutant.
- $9.10\,\mathrm{The}$ buyer is specifically aware that the finder of a mutant requires permission from the holder of the breeder's right with respect to the maternal strain to carry out the following activities regarding all material of the variety, including material harvested (including therefore flowers, plants and parts of plants), namely:
- a. produce or duplicate/multiply (propagate)
- b. conditioning for the purpose of propagation c. offering for sale

- d. sell or trade in any other way e. export and/or import f. holding in stock for any of the above under a through e
- $9.11\ Florensis\ can\ nominate\ a\ representative-including\ an\ independent\ third\ party-who$ will have the right to implement and realize its rights mentioned in this article, including the right to inspect the buyer's administration for the purpose of verification of buyer fulfilling his obligations meant in this article.
- 9.12 The buyer grants permission to wholesalers, auctions, importers and/or exporters to provide information to the holder of the breeders' rights and/or his representative regarding the quantity of harvested product that the buyer trades of the variety of the holder of breeders' rights. In addition, the buyer grants specific permission to the auctions to provide information to the holder of the breeders' rights and/or his representative regarding the quantity of his product that is traded at the auction under the code 'other'.

- Article 10: Complaints
 10.1 Florensis sells at least usual trading quality. The buyer is obliged to immediately inspect the products after delivery.
- 10.2 Complaints with respect to quality delivered or immediately visible damages must be done to Florensis in writing within 12 hours from delivery.
- 10.3 Complaints with respect to the number, the weight or the appearance of products (other than in relation to the quality delivered or immediately visible damages) must be done to Florensis in writing within 7 working days from delivery.
- 10.4 Complaints with respect to the capacity of germination or machine based purity must be done to Florensis in writing immediately after discovery, and cannot successfully be made any more after sixty days after delivery.
- 10.5 Complaints with respect to the genuineness or purity of a variety must be done to Florensis in writing immediately after discovery, and at any rate in the next growing season after purchase as soon as the crop is developed sufficiently for a correct examination
- 10.6 The buyer shall hold all products that he has complained about at Florensis' disposal for his own account.
- 10.7 All buyer's claims in connection with complaints with respect to the products delivered are legally barred from pursuing if the buyer has not observed the above mentioned obligations and the time periods which are part thereof.
- 10.8 All buyer's claims are equally barred and without legal effect if the buyer has traded the products delivered or if they are changed, processed or damaged or if the buyer is in breach with the fulfilment of any obligations that he has towards Florensis under any agreement.
- 10.9 If a claim is correct and (to be) recognized, Florensis will deliver satisfactorily as yet, without any right existing for the buyer to claim substitute or additional damages. If replacement or additional delivery is reasonably impossible for Florensis, or senseless for the buyer according to objective criteria having regard to the passing of time, Florensis shall instead credit the buyer for the price paid to the extent that this price relates to the unsatisfactory part of the products delivered.

Article 11: Liability

- 11.1 Florensis' liability in connection with possible inadequacies in products as delivered is limited to the additional or replacement delivery or to the credit relief mentioned in Article 10.9.
- 11.2 Florensis is never obliged to pay substitute or additional damages except and in so far as the damage suffered was inflicted intentionally or by the gross negligence of Florensis or its own employees. Florensis' liability for loss of profits or reputation damages however, is always excluded, except in the case of intention or conscious recklessness by the management of Florensis.
- 11.3 In all cases in which Florensis is obliged to pay damages, these will never be higher than, at its option, either the invoice value of the products delivered or of the advices rendered in connection with which the damages were incurred, or, if the damages are covered by an insurance policy of Florensis, the amount that is actually paid out by the insurer with respect thereto.

- 11.4 Any claim toward Florensis, except those recognized by Florensis, lapses after a period of 12 months from the time the claim arose
- 11.5 Florensis' employees and representatives, or independent contractors brought in by Florensis for the implementation of the agreement, can, toward the buyer, invoke all means of defence afforded by the agreement as if they themselves were party to that agreement.
- 11.6 The buyer will hold harmless and indemnify Florensis, its employees, its independent contractors and its representatives for each claim by third parties in connection with the products delivered, the advices rendered and/or any other part of the agreement implemented by Florensis.

Article 12: Buyer's default

- 12.1 If the buyer does not fulfil one or more of his contractual obligations toward Florensis or does not fulfil them on time or adequately, all claims of Florensis on the buyer are immediately due without Florensis being obliged to give to the buyer any prior notice of
- 12.2 In the case of buyer's default under any agreement with Florensis, all obligations from Florensis toward the buyer lapse, both under the agreement in question and under all other agreements between the parties.

Article 13: Payment

- 13.1 The buyer shall pay within 30 days from the date of invoice, unless advance payment has been stipulated or a longer payment period has been agreed in writing. In case delivery has taken place but an invoice has not yet been sent, the buyer shall pay the agreed upon price within 30 days from delivery.
- 13.2 If the buyer shall not have paid within the period mentioned in the precious section, he is automatically in default and without any need for further notice to that effect he will owe an interest of 1 $\!\!^{'}$ % per month or part of a month from the due date over the amount unpaid including VAT, and without diminishing any other rights that Florensis is entitled to.
- 13.3 All payments by buyer will take place without a right of suspension, discount or set of, into a bank account as directed by Florensis.
- 13.4 At the request of Florensis, the buyer shall offer security for his present or future obligations flowing from the agreement as concluded. As long as the security is not put up. Florensis is entitled to suspend its own obligations from the agreement. If the security is not put up within a reasonable time stated by Florensis, Florensis is entitled to rescind the agreement in writing in whole or in part without any obligation to pay damages and without diminishing any of its other rights.
- 13.5 All costs of collection incurred by Florensis, both of a court procedural or nor procedural nature, are for the account of the buyer. The costs are at least 15% of the sum

Article 14: Rescission and suspension

- 14.1 If the buyer does not fulfil one or more of his obligations, or does not fulfil them on time or adequately, is declared bankrupt, requests (temporary) moratorium, or proceeds with the liquidation of his business, or if his assets are attached in whole or in part, Florensis is entitled to suspend the implementation of the agreement or to rescind the agreement in whole or in part, at its option, by a written statement without the need for a prior notification of default, and with full reservation of any claim to which it is entitled for cost, damages and interest.
- 14.2 The buyer is not entitled to cancel any order as soon as Florensis has received it, regardless of any performance under the order. If the buyer cancels any order anyway, for whatever reason, he is still obliged to pay the price that the order relates to.
- Article 15 Disputes and applicable law
- 15.1 All disputes between Florensis and buyer shall be heard exclusively by the competent court in the Court District of Rotterdam
- 15.2 In addition, Florensis is at all times entitled to summon the buyer to appear before the court which is competent by law or by virtue of the applicable international convention.
- 15.3 All agreements with Florensis are subject to Dutch law. 15.4 In the case of a conflict between the Dutch version of these general conditions and the English version thereof, the Dutch version shall prevail.
